Prioritization List
Project Prioritization Process Overview

The project prioritization process in this ATP uses a data-driven methodology supported by objective information and City input. This process is therefore subject to the availability of suitable data, so initial prioritization model results are generally ported into carefully designed spreadsheets to be evaluated with other available data types to yield the best results.

The methodology uses selected criteria that are differentially weighted relative to each other to help address specific local issues, conditions, and values. For example, collisions and number of attractors (commercial centers, civic centers, and other points of interest) were given the highest input weights.

- Number of Attractors (Commercial centers, civic centers, other points of interest) (2)
- Number of Schools (1/4 mile buffer) (1)
- Number of Parks (1/4 mile buffer) (1)
- Reported Collisions (2)
- Walk to Work (500’ buffer) (0.75)
- Bike to Work (500’ buffer) (1)
- Households Without Vehicles (500’ buffer) (1.5)
- 2010 Population Density (Residents per acre, 500’ buffer) (0.5)
- 2010 Employment Density (Employed per 16+ Residents, 500’ buffer) (0.5)
- Freeway/Railway Crossings (500’ buffer) (0.5)
- Active Transportation Network/Gap Closure (0.5)
- Inter-Agency Coordination (0.5)
- Benefit/Cost Ratio (1)

The following section describes the 13 criteria determined to be most useful in prioritizing recommended projects in El Centro. Future facility ranking and implementation should be fine-tuned and adjusted accordingly based on any changing circumstances. Prioritized projects can be re-ranked to fit future funding cycles.

Number of Attractions

This criterion addresses points of interest and destinations that people would be likely to visit, or also called attractions. The number of parks, public facilities, bus stops and retail facilities within 500 feet (or average block length) of the identified project alignment are totaled and those with a higher point value receive a higher overall score.

Number of Schools

This criterion addresses schools along the project corridor. Schools within quarter-mile of the identified project alignment are counted, then totaled and those with a higher point value receive a higher overall score.

Number of Parks

This criterion addresses parks along the project corridor. Parks within quarter-mile of the identified project alignment are counted, then totaled and those with a higher point value receive a higher overall score.

Reported Collisions

This criterion addressed safety through five years of collision data, normalized by collisions per mile of recommended facility. Dataset was derived from the California Highway Patrol’s Statewide Integrated Traffic Records System (SWITRS).

Walk to Work

This criterion looks at the number of people who walk to work. Neighborhoods with higher populations of people that walk to work, or walk to transit, should get higher priority for improvement, especially if they lack the necessary facilities. It can also be said, that neighborhoods that have very little walking activity can be prioritized to increase pedestrian activity (Data Source: US Census Bureau, American Community Survey).
Appendix A: Prioritization List

Bike to Work
This criterion looks at the number of people who bike to work. Neighborhoods with higher populations of people that bike to work, or bike to transit, should get higher priority for improvement, especially if they lack the necessary facilities. It can also be said, that neighborhoods that have very little biking activity can be prioritized to increase cycling activity (Data Source: US Census Bureau, American Community Survey).

Household without Vehicles
This criterion looks at the number of households with no vehicles. To people who have no car and rely on public transportation, bicycles or walking to get to work and other destinations it is important to provide safe means of using these alternate transportation types (Data Source: US Census Bureau, American Community Survey).

Population Density
This criterion looks at the population density around project corridors. Bicycle and pedestrian facilities are more efficient and work best in highly populated areas where there are people to use the facilities (Data Source: US Census Bureau, American Community Survey).

Employment Density
This criterion looks at the employment density around project corridors. Pedestrian facilities are more efficient when they help transport people to work either directly or through other means of transportation such as transit (Data Source: US Census Bureau, American Community Survey).

Freeway / Railroad Crossings
This criterion addresses freeway crossings along the project corridor. Crossings within 500 feet of the identified project alignment are totaled and the segments with a higher number of crossings receive a higher weight as major crossings are a hindrance to a safe and viable pedestrian route and therefore need facilities to help keep pedestrians safe.

Active Transportation Network/Gap Closure
This criterion addresses potential sidewalk and bicycle network connectivity improvements by evaluating each recommended facility’s overall contribution to system completeness.

Inter-Agency Coordination
This criterion looks at projects that cross or are within the jurisdiction of other agencies such as the Imperial Irrigation District or Union Pacific Railroad. This criterion is allocated a negative weight given the additional coordination needed to analyze and implement these types of projects.

Benefit/Cost Ratio
This criterion involves a number of analyses that review the benefits of investments in bicycle and pedestrian infrastructure such as mode share changes, environmental benefits, increased accessibility, health benefits, and others. The proposed projects are then given a value and those with higher values are given a higher overall score.

Appendix B

Caltrans ATP Checklist
Active Transportation Plan Requirements

An active transportation plan prepared by a city or county may be integrated into the circulation element of its general plan or a separate plan which is compliant or will be brought into compliance with the Complete Streets Act, AB 1358 (Chapter 657, Statutes of 2008). An active transportation plan must include, but not be limited to, the following components or explain why the component is not applicable:

a) The estimated number of existing bicycle trips and pedestrian trips in the plan area, both in absolute numbers and as a percentage of all trips, and the estimated increase in the number of bicycle trips and pedestrian trips resulting from implementation of the plan.

See Chapter 3 and Chapter 5

b) The number and location of collisions, serious injuries, and fatalities suffered by bicyclists and pedestrians in the plan area, both in absolute numbers and as a percentage of all collisions and injuries, and a goal for collision, serious injury, and fatality reduction after implementation of the plan.

See Chapter 3

c) A map and description of existing and proposed land use and settlement patterns which must include, but not be limited to, locations of residential neighborhoods, schools, shopping centers, public buildings, major employment centers, and other destinations.

See Chapter 3

d) A map and description of existing and proposed bicycle transportation facilities, including a description of bicycle facilities that serve public and private schools and, if appropriate, a description of how the five Es (Education, Encouragement, Enforcement, Engineering, and Evaluation) will be used to increase rates of bicycling to school.

See Chapter 3 and Chapter 5

e) A map and description of existing and proposed end-of-trip bicycle parking facilities.

See Chapter 2

f) A description of existing and proposed policies related to bicycle parking in public locations, private parking garages and parking lots and in new commercial and residential developments.

Policies related to this component are included in the City’s General Plan Circulation Element

g) A map and description of existing and proposed bicycle transport and parking facilities for connections with and use of other transportation modes. These must include, but not be limited to, bicycle parking facilities at transit stops, rail and transit terminals, ferry docks and landings, park and ride lots, and provisions for transporting bicyclists and bicycles on transit or rail vehicles or ferry vessels.

See Chapter 3

h) A map and description of existing and proposed pedestrian facilities, including those at major transit hubs and those that serve public and private schools and, if appropriate, a description of how the five Es (Education, Encouragement, Enforcement, Engineering, and Evaluation) will be used to increase rates of walking to school. Major transit hubs must include, but are not limited to, rail and transit terminals, and ferry docks and landings.

See Chapter 3 and Chapter 5

i) A description of proposed signage providing wayfinding along bicycle and pedestrian networks to designated destinations.

See Chapter 5

j) A description of the policies and procedures for maintaining existing and proposed bicycle and pedestrian facilities, including, but not limited to, the maintenance of smooth pavement, ADA level surfaces, freedom from encroaching vegetation, maintenance of traffic control devices including striping and other pavement markings, and lighting.

See Chapter 5
k) A description of bicycle and pedestrian safety, education, and encouragement programs conducted in the area included within the plan, efforts by the law enforcement agency having primary traffic law enforcement responsibility in the area to enforce provisions of the law impacting bicycle and pedestrian safety, and the resulting effect on collisions involving bicyclists and pedestrians.

See Chapter 5

l) A description of the extent of community involvement in development of the plan, including disadvantaged and underserved communities.

See Chapter 4

m) A description of how the active transportation plan has been coordinated with neighboring jurisdictions, including school districts within the plan area, and is consistent with other local or regional transportation, air quality, or energy conservation plans, including, but not limited to, general plans and a Sustainable Community Strategy in a Regional Transportation Plan.

See Chapter 1

n) A description of the projects and programs proposed in the plan and a listing of their priorities for implementation, including the methodology for project prioritization and a proposed timeline for implementation.

See Chapter 5 and Appendix A

o) A description of past expenditures for bicycle and pedestrian facilities and programs, and future financial needs for projects and programs that improve safety and convenience for bicyclists and pedestrians in the plan area. Include anticipated revenue sources and potential grant funding for bicycle and pedestrian uses.

See Appendix C

p) A description of steps necessary to implement the plan and the reporting process that will be used to keep the adopting agency and community informed of the progress being made in implementing the plan.

See Chapter 5

q) A resolution showing adoption of the plan by the city, county or district. If the active transportation plan was prepared by a county transportation commission, regional transportation planning agency, MPO, school district or transit district, the plan should indicate the support via resolution.

See Appendix D

Source: Caltrans Local Assistance Program Guidelines: Chapter 22
Appendix C
Past ATP Expenditures
City’s Past ATP-Related Expenditures

The City of El Centro utilizes a diverse range of funding sources for bicycle and pedestrian facilities and programs. Local funding sources including the General Fund and Local Transportation Authority are leveraged with state and federal funding. Those non-local sources include the Active Transportation Program from the State of California and federal funding from the Highway Safety and Improvement Program, Congestion Mitigation and Air Quality, and Community Development Block Grant and have been incorporated into projects that have improved bicycling and pedestrian uses in the City. Future projects are anticipated to employ a similar funding strategy.
Appendix D

City Council Resolution
City Council Resolution No. 19-06

The Active Transportation and Safe Routes to School Plan was presented to the El Centro City Council on February 19, 2019. A short presentation that provided an overview of the planning process and the recommendations was included. City Council unanimously voted to approve the Plan as Resolution NO. 19-06.

REGULAR MEETING
EL CENTRO CITY COUNCIL
CITY HALL, COUNCIL CHAMBERS
1275 MAIN STREET, EL CENTRO, CA
TUESDAY, FEBRUARY 19, 2019 11:30 A.M.

The El Centro City Council met in regular session on Tuesday, February 19, 2019 at 11:34 a.m. in Conference Room “A”, El Centro City Hall, 1275 Main Street, El Centro, California for the purpose of closed session.

PRESENT:  Council: Oliva, Jackson, Silva, Walker
City Clerk Caldwell, City Manager Piedra, City Attorney Martyn Evans
ABSENT:  Council: Garcia (arrived at 11:45 a.m.)

Closed Session Public Comment
None

CITY COUNCIL CLOSED SESSION
Moved by Silva, second by Walker to adjourn into closed session for:

PENDING LITIGATION
Therefore, upon advice of its legal counsel, the City Council will recess to closed session pursuant to Government Code §54956.9(d)(1) regarding the following existing cases to which the City is a party: Antonio Cruz v. City of El Centro et al – ECU09958.

ANTICIPATED LITIGATION
Significant Exposure to Litigation Against the City, pursuant to Government Code Section 54956.9(d)(2) - a point has been reached where, in the opinion of the City Council based upon advice of its legal counsel, based on existing facts and circumstance, there is a significant exposure to litigation against the local City as follows:
  a. Arballo claim based upon alleged destruction of property.

Pursuant to Government Code Section 54956.9(d)(4) – a point has been reached where based upon existing facts and circumstances, the City will discuss initiation of an administrative proceeding or litigation – 2 cases (vicious dog and non-judicial foreclosure).

LABOR RELATIONS NEGOTIATIONS
The City Council will recess to closed session pursuant to Government Code §54957.6 to meet with Marcela Piedra, City Manager and Teri Brownlee, Human Resources Director for the purpose of reviewing the City’s position and instructing its representative(s) regarding matters of salaries, salary schedules, compensation paid in the form of fringe benefits, or, as applicable, other matters dealing with mandatory subjects within the scope of representation pursuant to Government Code §3504 as to the Certified Water Distribution Operators.

Motion unanimously carried. Mayor Garcia absent. (arrived at 11:45 a.m.)
9. Authorize Mayor to sign FY 2017 and FY 2018 JAG Certifications and Assurances and accept the related grant funding which will be used to purchase front line equipment for El Centro Police personnel.

11. See below*

AYES: Oliva, Jackson, Garcia, Silva, Walker
NOES: None
ABSENT: None
ABSTAINED: None

ITEM PULLED FOR DISCUSSION

*11. Presentation by Jacob Leon, KTUA Consultant, regarding the El Centro Active Transportation and Safe Routes to School Plan.

Moved by Oliva, second by Silva, to adopt Resolution No. 19-06, A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF EL CENTRO ADOPTING THE CITY OF EL CENTRO ACTIVE TRANSPORTATION AND SAFE ROUTES TO SCHOOL PLAN

AYES: Oliva, Jackson, Garcia, Silva, Walker
NOES: None
ABSENT: None
ABSTAINED: None

PUBLIC COMMENTS

A. Carolyn Virgil and Leroy Virgil, The Chopping Block, thanked the City Council and City Staff for making it possible to retrieve their possessions from their business located near the fire damaged building on 6th & Main.

B. Josie Hughey, Nails by Josie Hughey, thanked the City Council and City Staff for making it possible to retrieve their possessions from their business located near the fire damaged building on 6th & Main.

C. Monique Alford, Sure Helpline Crisis Center, announced and invited all to their upcoming events in April.

D. Sue Lee, El Centro, spoke on issues she has regarding trash and large items being left on the curbside, dogs running loose, and concern that 911 dispatchers are not aware were addresses with east or west begin.
15. Moved by Jackson, second by Silva, approving the appointment of Andy Alvarez to the Planning Commission to fill an unexpired term ending October 3, 2019.
   AYES: Oliva, Jackson, Garcia, Silva, Walker
   NOES: None
   ABSENT: None
   ABSTAINED: None

LEGISLATION ACTION - None

INFORMATIONAL ITEMS

18. Received and filed Attendance Records for Boards/Commissions (July-December 2018)

TASK FORCE AND MAYOR & COUNCIL MEMBERS REPORTS
Mayor and Council Members reported on their activities since last City Council meeting and upcoming events.

ADJOURNMENT
There being no further business to come before the City Council, Mayor Garcia adjourned 8:10 p.m.

L. Diane Caldwell, City Clerk

APPROVED BY:

Edgard Garcia, Mayor
Appendix E

Project Cost Estimates
Project Cost Estimates

Appendix E includes planning-level cost estimates for the proposed bicycle facilities and the Safe Routes to School improvements.

The planning cost estimates assume each bicycle facility or school walkshed as a stand-alone project. Therefore, the planning cost estimate is very conservative. It should be noted that there would be cost savings in design, management, permitting, and engineering costs when bicycle facilities are combined under one plan set. As an example, if each of the bicycle facilities were to design and constructed as a standalone project, the design, management, permitting and engineering could reach upwards of 2 million dollars. If the bicycle facilities were to be designed and processed as one large project, then a 30-50% cost savings can be expected as it is the most efficient and economical approach. A more practical approach is to group facilities with high priorities or facilities that ensure a complete network in a certain area of the City. Based on the available funding and project prioritization, an engineer's cost estimate can be prepared based on the design plans.

Cost saving could also occur during scheduled roadway maintenance. For example, when a roadway is schedule to be resurfaced as part of the County’s CIP or maintenance program, rather than re-striping to return the roadway to its existing lane configurations, the striping and signing plans from the PS&E package can be utilized.
## Planning Level Cost Estimate for El Centro ATP/SRTS Plan

### Citywide Bicycle Facility Recommendations

### General Notes:

1. Costs listed above are rounded up to the nearest $1k interval and includes furnishing, design, management, engineering, permitting, a contingency. Cost for multi-use paths may vary substantially based on materials, right-of-way acquisition and other factors. Cost for bicycle-boulevards may vary substantially based on right-of-way acquisition, traffic calming measures, minor/major street crossings and other features.

2. Planning level cost estimate is based on various resources and documents (See Unit Price List tab). Note that the cost are planning level only and design plans are required to prepare an engineer’s cost estimate.

3. Parking: Indicates on-street parking may be affected (i.e. removing parking)

4. Roadway: Indicates future roadway infrastructure and/or curb to curb width would be provided via annexation or future planned developments, therefore widening/right-of-way acquisition was not assumed in the cost.

5. Resurface: Indicates future resurfacing is needed to accommodate the proposed facility, therefore roadway resurfacing was assumed in the cost.

6. Contraint: Indicates a curb-to-curb constraint along a proposed Class 2 bicycle facility, therefore sharrows were assumed in the cost. To provide a consistent bicycle facility, widening and/or right-of-way acquisition would be needed.

7. Utilized IP: A signing and striping improvement plan was prepared by LLG for this facility. Therefore the improvement plan was utilized to determine the pavement legend and roadside sign quantities.

### Preparation Information:

**SUB-TOTAL:** $18,300.00

**DESIGN / PERMITTING / MANAGEMENT / ENGINEERING:** $20,000.00

**CONTINGENCY:** 25% $9,575.00

**TOTAL COST* (SEE ASSUMPTIONS BELOW):** $48,000.00

### General Notes:
1. LF = Linear Feet, SF = Square Feet, EA = Each, LS = Lump Sum
2. Assumed ideal roadway conditions or no major restriping of existing lane configurations which would not require resurfacing the roadway.
3. Assumed bike lane pavement legend and roadside sign are installed every 500 ft.
4. Assumed additional roadway width would be provided via annexation or future planned development along the east side of Plank Drive between N. of Wensley Avenue and Ross Road to accommodate the proposed bicycle facility.
5. Assumed roadway infrastructure with sufficient curb-to-curb width to exist between Orange Avenue and N. of Wensley Avenue and between Ross Avenue and Ocotillo Drive.
6. Design, Permitting, Management, Engineering Cost is assumed to be the max of 1) 25% of Subtotal or 2) $20k per mile, rounded up to the nearest $5k.

1. LF = Linear Feet, SF = Square Feet, EA = Each, LS = Lump Sum
2. May affect parking to accommodate the proposed bicycle facility.
3. Assumed bike lane pavement legend and roadside sign are installed every 500 ft.
4. Assumed Class III facility along constrained segment with shared lane pavement legend and roadside sign installed every 250 and 500 ft, respectively. To provide a consistent bicycle facility, widening and/or right-of-way acquisition would be needed.
5. Curb-to-curb available however major restriping to narrow lane widths/turn-lanes to 11 feet would be needed. Therefore, roadway resurfacing was assumed.

*Assumptions:
1. Assumed ideal roadway conditions or no major restriping of existing lane configurations which would not require resurfacing the roadway.
2. Design, Permitting, Management, Engineering Cost is assumed to be the max of 1) 25% of Subtotal or 2) $20k per mile, rounded up to the nearest $5k.
3. Assumed shared lane pavement legend and roadside sign are installed every 250 feet and 500 ft, respectively.

CONTINGENCY: 25% $29,900.00

**TOTAL COST** (SEE ASSUMPTIONS BELOW): $150,000.00

### General Notes:
1. LF = Linear Feet, SF = Square Feet, EA = Each, LS = Lump Sum  
2. Assumed roadway infrastructure with sufficient curb-to-curb width to exist between Lotus Canal and west of Cypress Drive.  
3. Assumed ideal roadway conditions or no major restriping of existing lane configurations which would not require resurfacing the roadway.  
4. Assumed bike lane pavement legend and roadside sign are installed every 500 ft.  
5. Design, Permitting, Management, Engineering Cost is assumed to be the max of 1) 25% of Subtotal or 2) $20k per mile, rounded up to the nearest $5k.  
6. Curb-to-curb constraint between Clark Road and 4th Street. Assumed Class III facility along constrained segment with shared lane pavement legend and roadside sign installed every 250 ft and 500 ft, respectively. To provide a consistent bicycle facility, widening and/or right-of-way acquisition would be needed.

</tr>
</tbody>
</table>

**SUB-TOTAL:** $740,000.00

**DESIGN / PERMITTING / MANAGEMENT / ENGINEERING:** $185,000.00  
**CONTINGENCY:** 25% $231,250.00

**TOTAL COST* (SEE ASSUMPTIONS BELOW):** $1,157,000.00

---

**General Notes:**
1. LF = Linear Feet, SF = Square Feet, EA = Each, LS = Lump Sum
2. Cost may vary substantially based on materials, right-of-way acquisition and other factors.

**Assumptions:**
1. Design, Permitting, Management, Engineering Cost is assumed to be the max of 1) 25% of Subtotal or 2) $20k per mile, rounded up to the nearest $5k.
2. Cost may vary substantially based on materials, right-of-way acquisition and other factors.

<tr>
<td>4</td>
<td>Install Bike Lane Pavement Legend (EA)</td>
<td>20</td>
<td>$165.00</td>
<td>$3,300.00</td>
</tr>
<tr>
<td>1</td>
<td>Install Roadside Sign - One Post (EA)</td>
<td>20</td>
<td>$350.00</td>
<td>$7,000.00</td>
</tr>
</tbody>
</table>

**SUB-TOTAL:** $18,300.00

**DESIGN / PERMITTING / MANAGEMENT / ENGINEERING:** $20,000.00

**CONTINGENCY:** 25% $9,575.00

**TOTAL COST* (SEE ASSUMPTIONS BELOW):** $48,000.00

---

**General Notes:**
1. LF = Linear Feet, SF = Square Feet, EA = Each, LS = Lump Sum
2. Assumed bike lane pavement legend and roadside sign are installed every 500 ft.
3. Design, Permitting, Management, Engineering Cost is assumed to be the max of 1) 25% of Subtotal or 2) $20k per mile, rounded up to the nearest $5k.
4. Assumed additional roadway width would be provide via annexation or future planned development along the east and/or west side of Farnsworth Lane between Danenberg Drive and City's southern limit to accommodate the proposed bicycle facility.

HOW TO NAVIGATE THROUGH THIS PLANNING LEVEL COST ESTIMATE WORKBOOK:

1. On the SUMMARY TAB, click on any “Facility No.” to jump to that particular planning cost estimate sheet.

<table>
<thead>
<tr>
<th>FACILITY NO.</th>
<th>SCHOOL</th>
<th>COST</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Central Union High School &amp; Wilson Jr High</td>
<td>$859,000.00</td>
</tr>
<tr>
<td>2</td>
<td>De Anza Magnet School</td>
<td>$386,000.00</td>
</tr>
<tr>
<td>3</td>
<td>Desert Garden Elementary School</td>
<td>$264,000.00</td>
</tr>
<tr>
<td>4</td>
<td>Desert Oasis High School</td>
<td>$241,000.00</td>
</tr>
<tr>
<td>5</td>
<td>Harding Elementary School</td>
<td>$554,000.00</td>
</tr>
</tbody>
</table>

2. On each individual planning cost estimate sheet, click on the LLG Logo to return to the SUMMARY TAB.

3. On each individual planning cost estimate sheet, click on the “Unit Cost” column title to jump to the UNIT PRICE LIST TAB.

4. Note that the item DESCRIPTION (UNIT) and item cost on each individual planning cost estimate sheet are linked to the UNIT PRICE LIST TAB. Therefore these, the unit cost can be changed/adjusted as needed in the UNIT PRICE LIST TAB and the change will take effect globally on sheets.

</tbody>
</table>

**TOTAL:** $11,476,000.00

General Notes:
1. Cost listed above are rounded up to the nearest $1k interval and includes furnishing, design, management, engineering, permitting and a contingency. Cost may vary substantially should there be a need to remove/relocate any conflicting utilities and structures (e.g. electrical/power poles, storm drains, etc.). Cost for sidewalk, curb ramp, and crossing maintenance is typically an annualized and ongoing cost therefore these maintenance costs were not included.
2. Planning level cost estimate is based on various resources and documents (see Unit Price List tab). Note that the cost are planning level only and design plans are required to prepare an engineer's cost estimate.
3. The installation of traffic control devices (i.e. signals, all-way stop control, pedestrian hybrid beacons and pedestrian flashing beacons) should be further evaluated based on the warrants/guidance of the CA MUTCD and or local documents.

**SUB-TOTAL:** $517,550.00

**DESIGN / PERMITTING / MANAGEMENT / ENGINEERING:** 25% $129,387.50

**CONTINGENCY:** 25% $161,734.38

**TOTAL COST* (SEE ASSUMPTIONS BELOW):** $809,000.00

---

**General Notes:**
1. EA = Each, I = Intersection; LF = Linear Foot, RRFB = Rectangular Rapid Flashing Beacon
2. An engineer’s study should be conducted based on the CA MUTCD and/or local guidances/warrants for installation of traffic control devices (i.e. signals, all-way stop control, pedestrian hybrid beacons, pedestrian flashing beacons and crosswalks at an uncontrolled approach).

*Assumptions:
1. Cost for sidewalk & curb ramp maintenance is typically an annualized and ongoing cost therefore these maintenance costs were not included.
2. The installation of crosswalks and stop controls were assumed at a four-legged intersection to be conservative.
3. Cost may vary substantially should there be a need to remove/relocate any conflicting utilities and structures (e.g. electrical/power poles, storm drains, etc.)
4. Cost for Pedestrian Flashing Beacons or Pedestrian Hybrid Beacons may vary substantially based on roadway width and other factors.
5. Cost for crosswalk maintenance entails the removal and re-installation of existing crosswalks. Crosswalks were assumed at a four-legged intersection to be conservative.

**DESIGN / PERMITTING / MANAGEMENT / ENGINEERING:** 25% $125,837.50

**CONTINGENCY:** 25% $157,296.88

**TOTAL COST* (SEE ASSUMPTIONS BELOW):** $787,000.00

---

**General Notes:**

1. EA = Each, I = Intersection; LF = Linear Foot, RRFB = Rectangular Rapid Flashing Beacon
2. An engineer’s study should be conducted based on the CA MUTCD and/or local guidances/warrants for installation of traffic control devices (i.e. signals, all-way stop control, pedestrian hybrid beacons, pedestrian flashing beacons and crosswalks at an uncontrolled approach).

*Assumptions:

1. Cost for sidewalk, curb ramp, and crossing maintenance is typically an annualized and ongoing cost therefore these maintenance costs were not included.
2. The installation of crosswalks and stop controls were assumed at a four-legged intersection to be conservative.
3. Cost may vary substantially should there be a need to remove/relocate any conflicting utilities and structures (e.g. electrical/power poles, storm drains, etc.)
4. Cost for Pedestrian Flashing Beacons or Pedestrian Hybrid Beacons may vary substantially based on roadway width and other factors.

Fax: (858) 300-8810

**Erika Carino, EIT, Transportation Engineer II**

**K.C. Yellapu, PE, Associate Principal**

**Date:** 7/5/2018

**Project #:** 3-17-2724
### Planning Cost Estimate for

**El Centro ATP/SRTS Plan**  
**ICOE Valley Academy**  
**School Walkshed Improvements**

<td>$382,900.00</td>
</tr>
</tbody>
</table>

**SUB-TOTAL:** $457,750.00

**DESIGN / PERMITTING / MANAGEMENT / ENGINEERING:** 25% $114,437.50  
**CONTINGENCY:** 25% $143,046.88

**TOTAL COST** (SEE ASSUMPTIONS BELOW): $716,000.00

---

**General Notes:**

1. EA = Each, I = Intersection; LF = Linear Foot, RRFB = Rectangular Rapid Flashing Beacon
2. An engineer’s study should be conducted based on the CA MUTCD and/or local guidances/warrants for installation of traffic control devices (i.e. signals, all-way stop control, pedestrian hybrid beacons, pedestrian flashing beacons and crosswalks at an uncontrolled approach).

*Assumptions:*

1. Cost for sidewalk, curb ramp, and crossing maintenance is typically an annualized and ongoing cost therefore these maintenance costs were not included.
2. The installation of crosswalks and stop controls were assumed at a four-legged intersection to be conservative.
3. Cost may vary substantially should there be a need to remove/relocate any conflicting utilities and structures (e.g. electrical/power poles, storm drains, etc.)
4. Cost for Pedestrian Flashing Beacons or Pedestrian Hybrid Beacons may vary substantially based on roadway width and other factors.
